ABSTRACT OF THE DISCLOSURE

2	An electrothermal rack of a hair dryer includes a main body
3	including a plurality of support wings each having a mediate portion formed
4	with a positioning section formed with a plurality of inner insertion recesses.
5	Each of the support wings has an outer side formed with a protruding plate
6	formed with a plurality of outer insertion recesses. Each of the support wings is
7	formed with a slideway between the positioning section and the protruding
8	plate. Thus, the electrothermal body forms a multi-loop inner layer and a
9	multi-loop outer layer around the support wings to increase the heating area of
10	the electrothermal rack, thereby enhancing the heating efficiency of the hair
11	dryer.
